

IntelliGuard™

IGA-8A3 - Copolymer Roof System

This product is an elastomeric coating that transforms your existing roof membrane into an attractive and highly reflective surface. This coating is recommended for most common roof substrates; wood, metal, EPDM, APP, TPO, and Hypalon. (Application over tar-based roofing is not recommended)

IntelliGuard™ is also available in safety colors, including safety yellow. Caution areas can be marked at roof perimeters, skylights, roof hatch openings, and other areas where care and safety must be exercised.

Product Benefits/Features:

- Expands 2.5x more than other products, and 500% more than the original cured surface
- 3x more [tensile strength](#) (1000 psi vs 275 psi)
- 32 mil finish ([rubberized pond liners = 20 mil](#))
- 0.04% water absorption in lab tests
- 82.5% solar reflectance
- Material stability maintained (10 days at 120°F)

Dorothy Gale Roofing Group manufactures and installs a patented, fluid applied, elastomeric roof system across multiple geographically diverse regions in the Northeastern United States. Our IntelliGuard™ roofing system has proven 98% less likely to be breached during 3,500+ major weather events that have taken place since the 1980's.
